Breath Analysis - A Tool for Investigating Liver Disease and other Metabolic Conditions

Breath biomarkers could lead to non-invasive detection and monitoring for liver disease, diabetes, kidney disease, heart failure, and other cardiovascular and metabolic diseases (CVMD).

Discover how Breath Biopsy® could transform your liver research workflow. Find out more by exploring our CVMD webpage, featuring:

Presentations and webinars discussing breath research into the detection of metabolic disease.

Case studies on research investigating the biomarkers associated with different CVMDs.

Featured articles from our blog, exploring links between metabolic diseases and breath.

Articles, publications, and posters detailing the relationships between CVMD and VOCs.
